Human papillomavirus infection

Human papillomavirus type 18 and intraepithelial lesions of the cervix. CM MCCLACHLIN, JE TATE, JC ZITZ, EE SHEETS, CP CRUM. Am J Pathol 1994; 144; 141.

Analysis of HLA-DR expressions on keratinocytes in cervical neoplasia.

Parathyroid hormone-related protein and human papillomavirus in gynecological tumors.

Antibody response to a synthetic peptide derived from the human papillomavirus type 6/11 L2 protein in recurrent respiratory papillomatosis: correlation between Southern blot hybridisation, polymerase chain reaction and serology.

Human papillomavirus type-18 E6 messenger RNA in primary tumours and pelvic lymph nodes of Hungarian patients with squamous cervical cancer.

Human papillomavirus 18-immortalised endocervical cells with in vitro cytokeratin expression characteristics of adenocarcinomas.

Integration of human papillomavirus type 6a DNA in a tonsillar carcinoma: chromosomal localisation and nucleotide sequence of the genomic target region.

Human herpesvirus 6 infects cervical epithelial cells and transactivates human papillomavirus gene expression.

Delayed-type hypersensitivity response to human papillomavirus type 16 E6 protein in a mouse model.

Immune response to human papillomavirus type 16 E6 gene in a live vaccinia vector.

Functional oligomerisation of purified human papillomavirus types 16 and 6b E7 proteins expressed in Escherichia coli.

Elevated wild-type p53 protein levels in human epithelial cell lines immortalised by the human papillomavirus type 16 E7 gene.

Elevated expression and activity of mitotic regulatory proteins in human papillomavirus immortalised keratinocytes.

Interaction of human papillomavirus type 16 capsid proteins with HPV DNA requires an intact L2 N-terminal sequence.

Human papillomavirus type 11 E2 proteins repress the homologous E6 promoter by interfering with the binding of host transcription factors to adjacent elements.

Scanning the structure and antigenicity of HPV-16 E6 and E7 oncoproteins using antipeptide antibodies.

Cationic liposomes mediated delivery of antisense oligonucleotides targeted to HPV 16 E7 mRNA in CaSki cells.
